- This fund invests primarily in high-yielding, sub-investment grade or non-rated debt securities of issuers in the Greater China region.

  The fund is subject to risk to capital and income, foreign currency risk, risks of investing in emerging market, Chinese Renminbi currency and conversion risk, Mainland China tax risk, risks associated with Mainland China debt securities, risk associated with urban investment bonds, risk associated with collateralised and/or securities debt instruments, real estate related securities risk, concentration risk and risks associated with debt securities, including Credit / Counterparty, Interest Rate, Downgrading, Valuation and Credit Rating Risk. The fund may invest in debt securities rated below investment grade or unrated securities which are subject to lower liquidity, higher volatility, heightened risk of default and loss of principal and interest than higher-rated/lower yielding debt securities. Although the fund will generally invest in income-producing securities, it is not guaranteed that all underlying investments will generate income. Higher yields generally mean that there will be increased potential for capital appreciation and / or depreciation for fixed income securities.

  Investments by a fund in China fixed income securities through the China interbank bond market scheme, which are subject to QFI risk, China asset risk and risk associated with investment in China fixed income instruments and with Bond Connect. The fund may invest in "Dim Sum" bonds. The "Dim Sum" bond market may be more susceptible to volatility and illiquidity.

- with Bond Connect. The fund may invest in "Dim Sum" bonds. The "Dim Sum" bond market may be more susceptible to volatility and illiquidity.

   The fund may invest in instruments with loss-absorption features which are subject to greater capital risks, liquidity, valuation and sector concentration risk. The fund may invest in CoCos, which are highly complex and are of high risk. The fund may also invest in senior non-preferred debts, which may be subject to write-down upon the occurrence of a trigger event and may result in total loss of principal invested.

   The fund's net derivative exposure may be up to 50% of its NAV, the use of derivatives may involve liquidity risk, counterparty credit risk, volatility risk, valuations risks and over+the-counter transaction risk, at times. Exposure to financial derivative instruments and its leverage element may lead to a high risk of significant loss by the fund.

   For dividend of certain share classes, payment of dividends out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any such distributions may result in an immediate reduction of the NAV per share/ unit. For the hedged share class the distribution amount and NAV of such share class may be adversely affected by differences in the interest rates of the reference currency of the hedged share class and the fund's base currency, resulting in more distribution that is paid out of capital and hence a greater erosion of capital than other non-hedged share classes.
- Investors may suffer substantial loss of their investments in the fund. Investor should not invest in the fund solel based on the information provided in this document and should read the offering documents, including Product Key Facts (including the risk factors) for details.

For AHMDIST(G)(hedged) share class, dividend distributions may include a premium when the interest rate of the hedged currency is higher than the fund's reference currency interest rate. The Board expects to recommend distribution of substantially the whole gross Investment income, and may determine the extent dividends may be paid out of realised and unrealised capital gains as well as capital. 就A股H每月派息(G)(對沖)股份類别而言,股息分派可能計入因對沖貨幣的利率高於基金報價貨幣利率而產生的溢價,以及因對沖貨幣利率低於基金報價貨幣的利率而出現的折讓。董事會預期將就幾乎所有的總投資收益經蓋派發股息,並可能釐定從已變現及未變現資本收益以至資本中撥付的股息水平。
