[†] The ongoing charges figure is based on expenses for the year ended 31 August 2023. This figure may vary from year to year. The ongoing charges figure is an annual figure calculated by adding the applicable charges and payments deducted from the assets of the Portfolio and then dividing by the Portfolio's average net asset value for the fiscal year attributable to the relevant share class.

▲ The ongoing charges of this share class have been capped at this figure and, accordingly, the excess over such figure as at the Fund's fiscal year end has been borne by the Management Company.

△ The ongoing charges figure of this share class is an estimated figure. The ongoing charges of this share class have been capped at this figure and, accordingly, the excess over such figure as at the Fund's fiscal year end will be borne by the Management Company.

* Different minimum, additional and maximum investment limits may apply to different classes of shares denominated in different currencies. Investors should refer to the offering document of the Fund for details.

What is this product?

The Mortgage Income Portfolio (the "Portfolio") is a portfolio of AB FCP I (the "Fund"), a mutual investment fund domiciled in Luxembourg and its home regulator is Commission de Surveillance du Secteur Financier.

Objectives and Investment Strategy

Objectives

The investment objective of the Portfolio is to achieve a high risk-adjusted total return.

Strategy

The Portfolio seeks to achieve its objective by investing in mortgage-related securities and other asset-backed securities. The Portfolio may invest in securities of both Investment Grade (as defined in the Prospectus of the Fund to mean fixed-income securities rated Baa (including Baa1, Baa2 and Baa3) or higher by Moody's or BBB (including BBB+ and BBB-) or higher by S&P, or the equivalent thereof by at least one internationally recognized statistical ratings organization) and non-Investment Grade quality originated by a wide array of originators and sponsors. It is anticipated that under normal market conditions, no more than 50% of the Portfolio's net asset value will be invested in below-Investment Grade securities at time of purchase. The Portfolio's investments may include fixed and floating rate securities, including agency mortgage-backed securities and non-agency (i.e., privately issued) mortgage-backed securities as well as other asset-backed securities, commercial mortgage-backed securities, and collateralized debt obligations and related financial derivative instruments and currencies. The Portfolio will have at least two-thirds of its net asset value invested in mortgage-related securities.

The Portfolio may also invest less than 30% of its net asset value in debt instruments with loss-absorption features as defined by the SFC, including, but not limited to, contingent convertible securities, other Tier 1 and Tier 2 capital instruments and senior non-preferred debts. These instruments may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger events.

The Investment Manager does not expect to utilize bank borrowing in implementing the Portfolio's investment strategy.

The Portfolio may use financial derivative instruments and efficient portfolio management techniques for purposes such as: hedging against interest rate, credit and currency fluctuations, manage duration, as an alternative to investing directly in the underlying investments and efficient portfolio management purposes. These financial derivative instruments may include, but are not limited to, options, futures and currency transactions.

Under exceptional circumstances (e.g. market crash or major crisis), the Portfolio may be invested temporarily up to 100% of net asset value in liquid assets such as bank deposits, certificate of deposits, commercial paper and treasury bills for cash flow management.

Use of derivatives / Investment in derivatives

The Portfolio's net derivative exposure may be up to 50% of the Portfolio's net asset value.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

1. General Investment Risk

The Portfolio's investment may fall in value due to any of the key risk factors below and therefore your investment in the Portfolio may suffer losses. There is no guarantee of the repayment of principal.

**2. Debt Securities Risk**

- Credit / Counterparty Risk

The Portfolio is exposed to the credit/default risk of issuers of the debt securities that the Portfolio may invest in.

- Interest Rates Risk

The Portfolio invests in debt securities where its value will generally vary inversely with changes in interest rates and may affect the net asset value of the Portfolio. As interest rates rise, debt securities prices generally fall and vice versa. Prices of longer-term securities tend to rise and fall more than short-term securities.

- Volatility and Liquidity Risk

The debt securities in emerging markets that are less developed may be subject to higher volatility and lower liquidity compared to more developed markets. The prices of securities traded in such markets may be subject to fluctuations. The bid and offer spreads of the price of such securities may be large and the Portfolio may incur significant trading costs.

- Downgrading Risk

The Portfolio will invest in debt securities (including bonds). An issuer of such debt securities may experience an adverse change in its financial condition which may in turn result in a downgrading in the credit rating to such issuer and debt securities issued by such issuer. Credit ratings of debt securities reflect the issuer's ability to make timely payments of interest or principal—the lower the rating, the higher the risk of default. The adverse change in financial condition or decrease in credit rating(s) of issuer and debt securities may result in increased volatility in, and adverse impact on, the price of the relevant debt security and negatively affect liquidity, making any such debt security more difficult to sell. The value of the Portfolio may be adversely affected. The Investment Manager may not be able to dispose the debt securities that are being downgraded.

- Risk Associated with Debt Securities Rated Below Investment Grade or Unrated

The Portfolio will invest in high yield, high risk debt securities (including bonds) that are rated in the lower rating categories (i.e. below Investment Grade) or which are unrated. Debt securities below Investment Grade and unrated are considered to be subject to higher volatility and greater risk of loss of principal and interest than higher-rated securities and are considered to be predominantly speculative with respect to the issuer's capacity to pay interest and repay principal, which may in any case decline during sustained periods of deteriorating economic conditions or rising interest rates. The market for lower-rated securities may be thinner and less active than that for higher-rated securities, which can adversely affect the prices at which these securities can be sold. As a result the Portfolio, and thus the investors of the Portfolio, may suffer losses.

- Sovereign Debt Risk

The Portfolio will be exposed to the direct or indirect consequences of political, social and economic changes in various countries by investing in the bonds issued or guaranteed by governmental entities. In adverse situations, these political, social and economic changes in a particular country may affect a particular government's ability or willingness to make or provide for timely payments of its debt obligations or may request the Portfolio to participate in restructuring such debts. The Portfolio may suffer significant losses when there is a default of sovereign debt issuers.

- Valuation Risk

Valuation of the Portfolio's investments may involve uncertainties and judgmental determinations. If such valuation turns out to be incorrect, this may affect the net asset value calculation of the Portfolio.

- Credit Rating Risk

Credit ratings assigned by rating agencies are subject to limitations and do not guarantee the creditworthiness of the security and/or issuer at all times.

3. Risks Associated with Collateralized and/or Securitized Products (such as Asset-Backed Securities, Mortgage-Backed Securities and Asset-Backed Commercial Papers)

The Portfolio invests in mortgage-backed securities which may be highly illiquid and prone to substantial price volatility. These instruments may be subject to greater credit, liquidity and interest rate risk compared to other debt securities. They are often exposed to extension and prepayment risks and risks that the payment obligations relating to the underlying assets are not met, which may adversely impact the returns of the securities.

ALLIANCEBERNSTEIN®

4. Concentration Risk

The Portfolio's investments are concentrated in mortgage-related securities and other asset-backed securities. The value of the Portfolio may be more volatile than that of a fund having a more diverse portfolio of investments. The value of the Portfolio may be more susceptible to adverse economic, political, policy, foreign exchange, liquidity, tax, legal or regulatory event affecting the market.

5. Management Risk

The Portfolio may be subject to management risk because it is an actively managed investment fund. The Investment Manager will apply its investment techniques and risk analyzes in making investment decisions for the Portfolio, but there can be no guarantee that its decisions will produce the desired results.

6. Currency Risk

Underlying investments may be denominated in one or more currencies different from the Portfolio's base currency. Also, a class of shares may be designated in a currency other than the base currency of the Portfolio. This means changes in exchange rate controls, currency movements in such underlying investments and fluctuations in the exchange rates between these currencies and the base currency may significantly and unfavorably affect the net asset value of the Portfolio's shares.

RMB is currently not freely convertible and is subject to exchange controls and restrictions which, under exceptional circumstances, may cause a delay in payment of redemptions and/or dividend payments in RMB. Although offshore RMB (CNH) and onshore RMB (CNY) are the same currency, they trade at different rates. Any divergence between CNH and CNY may adversely impact investors.

7. Illiquid Assets Risk

The difficulty of purchasing or selling a security at an advantageous time or price may have a negative impact on the Portfolio's performance.

8. Risks Associated with Payment of Dividends out of Capital

The Management Company has the sole and absolute discretion to amend the dividend policy, subject to the SFC's prior approval (if required) and by giving no less than one month's prior notice to investors. Dividend yield is not indicative of return of the Portfolio. Dividends may be paid from capital or effectively out of the capital of the Portfolio at the discretion of the Management Company, which may amount to a partial return or withdrawal of an investor's original investment or from any capital gains attributable to that original investment, and result in an immediate decrease of the net asset value per Share. The distribution amount and net asset value of the currency hedged share classes may be adversely affected by differences in the interest rates of the reference currency of the currency hedged share classes and the Portfolio's base currency, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than other non-hedged share classes.

9. Risk in Investing in Financial Derivative Instruments

Risks in investing with financial derivative instruments include counterparty / credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The leverage element / component of a financial derivative instrument can result in a loss significantly greater than the amount invested in the financial derivative instrument by the Portfolio. Exposure to financial derivative instrument may lead to a high risk of significant loss by the Portfolio.

AB FCP I
Mortgage Income Portfolio

How has the Portfolio performed?

The bar chart below shows the past performance of Class AT USD Shares, which has been designated as the representative share class by the Management Company as it is a focus share class made available to Hong Kong investors.

Portfolio launch year: 1994

Class AT USD Shares launch year: 2014

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-to-NAV, with dividend reinvested.
- These figures show by how much Class AT USD Shares have increased or decreased in value during the calendar year being shown.
- Performance data has been calculated in USD including ongoing charges and excluding any subscription fee and redemption fee you might have to pay. Where no past performance is shown there was insufficient data available in that year to provide performance.
- With effect from 4 May 2020, the Portfolio adopted 3-Month LIBOR (USD) as its benchmark. With effect from 1 January 2022, the benchmark is changed to Secured Overnight Financing Rate (SOFR) due to the retirement of LIBOR.

Is there any guarantee?

This Portfolio does not have any guarantees. You may not get back the amount of money you invest.

What are the fees and charges?

(Different fee structure apply to different classes of shares. Investors should refer to the offering document of the Fund for details.)

Charges which may be payable by you

You may have to pay the following fees when dealing in the shares of the Portfolio:
