

abrdn SICAV I - Japanese Sustainable Equity Fund

A Acc JPY

31 March 2024

Important Information

- The Fund invests in equities and equity-related securities of companies registered in or conducting the bulk of their business activities in Japan.
- The Fund is therefore exposed to risks related to equity, concentration and exchange rates.
- The Fund's net derivative exposure may be up to 50% of the Fund's net asset value and subject to counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk.
- Investment in this fund may involve a high degree of risk and may not be suitable for all investors. It is possible that the entire value of the investment could be lost.
- Investors should not invest in this Fund based solely on this document and should read the relevant offering documents for further details including risk factors.

Objective

The Fund aims to achieve a combination of growth and income by investing in companies in Japan, which adhere to the abrdn Japanese Sustainable Equity Investment Approach (the "Investment Approach").

The Fund aims to outperform the MSCI Japan Index (JPY) benchmark before charges.

Source: abr dn, total return, Gross of Fees, BPSS, Datastream, USD, as of 29/02/2024. Please note the risk analytics figures are calculated on gross returns whereas the performance figures are based on net asset value (NAV) returns. In addition, the risk analytics figures lag the performance figures by one month. It should be noted that the figures provided regarding risk would be adjusted if fund fees and expenses were included.^ 3 and 5 year annualised. Beta is a measure of the volatility of a portfolio in comparison to a benchmark index. Fund volatility measures historical volatility. Information ratio measures the portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. R-squared measures the percentage of a fund or security's movements that can be explained by movements in a benchmark index. Sharpe ratio measures risk-adjusted performance. Tracking error measures the divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.

To help you understand this fund and for a full explanation of risks and the overall risk profile of this fund and the share classes within it, please refer to the Product Key Facts Statement and Prospectus which are available on our website www.abrdn.com/hk. The Prospectus also contains a glossary of key terms used in this document.

¹These are the maximum charges that we might take out of your money before it is invested. In some cases, the charges may be less and you should speak to your financial advisor about this.

²The Ongoing Charge Figure (OCF) is the overall cost shown as a percentage of the value of the assets of the fund. It is made up of the Annual Management Charge (AMC) of 1.50% and other charges. It does not include any initial charges or the cost of buying and selling stocks for the fund. The Ongoing Charges figure can help you compare the annual operating expenses of different funds. There are other applicable costs. The other operating charges figure (OOC) is the total expenses paid by each share class, against its average net asset value. This includes the annual management charge, the other operating expenses and any synthetic element to incorporate the ongoing charges of any underlying qualifying investments. The OOC can fluctuate as underlying costs change. Where underlying costs have changed, the OOC disclosed in the Fund offering Documents will be updated to reflect current changes.
